This is Fagron

Fagron is the world's leading global pharmaceutical compounding company, bringing personalised pharmaceutical care to hospitals, pharmacies, clinics, and patients in more than 30 countries worldwide.

Pharmaceutical compounding offers a solution for patients who require medications that have been discontinued by drug manufacturers and helps patients who face a supply shortage of their normal medications. It also allows pharmacists and doctors to work together to create tailor-made medications (such as combination pain therapies or hormone replacement therapies) that are not commercially available.

Fagron South Africa is an established and respected partner in the pharmaceutical compounding industry, and our state-of-the-art compounding pharmacies in Johannesburg and Cape Town have served patients, prescribers and pharmacists since 1995.

We are uniquely positioned to use the highest quality active pharmaceutical ingredients available to produce, test and deliver quality assured compounded preparations.

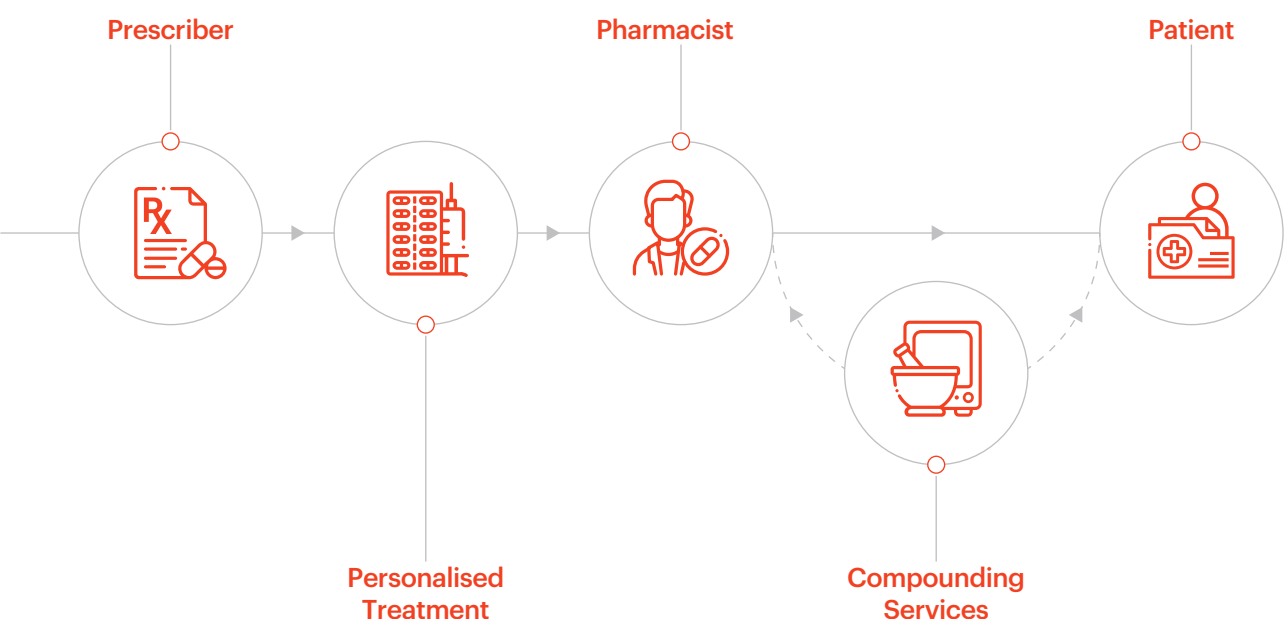

Our Purpose

Together we create the future of personalising medicine.

Together	Create	Personalising
We enable pharmacists, prescribers, hospitals, and industry to provide quality, safety, and service for their patients.	We create value in healthcare by offering a wide range of compounding services and products.	Personalisation of treatment to cover the individual patient’s need through pharmaceutical compounding. Increasing effectiveness, quality and safety.

Together we create value.

Injectables

Injectables

Discover our diverse range of sterile injectable medications.

Fagron South Africa runs state-of-the-art manufacturing facilities in Johannesburg and Cape Town where meticulous attention is given to the compounding of sterile injectable medications.

These facilities adhere to rigorous quality standards and regulations to ensure the safety, quality and efficacy of each product.

Advanced technology and strict quality control measures are employed throughout the process, from raw material selection to final packaging.

Our commitment to excellence is reflected in our facilities, ensuring the highest standards of pharmaceutical compounding.

Premium Injectable Formulations

Explore our comprehensive selection of sterile injectable medications, featuring formulations rich in essential vitamins, minerals, amino acids, antioxidants, trace elements, hormones, lipolytic agents, bacteriostatic agents, glucocorticoids and viscosupplementation solutions.

Urology

Treating Erectile Dysfunction

Urology

Multifaceted erectile dysfunction management with injections and adjunctive therapies.

For over 25 years, Fagron South Africa has been a trusted partner in providing individualised treatment solutions for Erectile Dysfunction (ED).

We offer a broad range of compounded intracavernous penile injections, including Monotherapy, Bi-Mix, Tri-Mix and Quad-Mix formulations.

Our formulations are tailored to each patient's specific needs based on their diagnosis and treatment goals. Additionally, Fagron can collaborate with prescribers to explore complementary treatment options such as testosterone replacement therapies and PDE5 inhibitor medications, ensuring a multifaceted approach to ED management.

Tailored Treatment Options

We recognise that a one-size-fits-all solution does not always work. Here, we present a range of options, including compounded intracavernous injections, to address individual patient needs and complement existing treatment plans.

Urology

Monotherapy IC Injections

Alprostadil	10 – 80 ug	0.25 – 50 mL
-------------	------------	--------------

Bi-Mix IC Injections

Alprostadil	10 – 40 ug	0.35 – 50 mL
Chlorpromazine	1 mg	
Alprostadil	10 – 80 ug	0.35 – 50 mL
Papaverine	12 – 30 mg	
Chlorpromazine	1 mg	0.35 – 50 mL
Papaverine	12 – 30 mg	

Tri-Mix IC Injections

Alprostadil	10 – 80 ug	1 – 50 mL
Chlorpromazine	1 mg	
Papaverine	12 – 30 mg	
Chlorpromazine	1 mg	1 – 50 mL
Papaverine	12 – 30 mg	
Atropine	0.1 – 5 mg	

Quad-Mix IC Injections

Alprostadil	10 – 80 ug	1 – 50 mL

Ophthalmology

Ophthalmology

Ophthalmic solutions you can rely on.

Fagron South Africa is recognised as the industry standard for ophthalmic compounding when commercially available treatment is not viable. Our ophthalmic preparations are designed to prioritise patient health, safety and effective treatment outcomes.

Ophthalmologists and surgery centres nationwide trust our customised preparations to help improve certain disorders of the eye, eyelids and ducts. These conditions include fungal, bacterial and viral infections, allergic conjunctivitis, dry eye, glaucoma, retina conditions and corneal ulcers.

Custom Ophthalmic Preparations

We prepare customised ophthalmic preparations in the required concentration, dosage and form.

Examples of the dosage forms in our ophthalmic assortment include:

- Sterile ophthalmic drops
- Ophthalmic injections
- Ophthalmic ointments
- Pre- and post-operation ophthalmic treatments
- Preservative-free ophthalmic drops
- Diagnostic solutions

Ophthalmology

Pellet Implants

Treating Hormonal Imbalance

Pellet Implants

Health begins with
hormonal balance.

Hormone imbalance is a common side effect of the ageing process and everyday living. Along with diet, exercise and nutrition, supplementation with bioidentical hormones can help restore hormonal imbalance within the body.

Fagron has developed innovative, effective and safe treatment options to treat patients during all stages of life.

Practitioners can offer their patients a convenient and long-acting option for hormone replacement therapy (HRT) with Fagron's bioidentical hormone pellet implants.

Specific, Slow-releasing, Small

These rice-sized implants are inserted in a simple in-office procedure, releasing a steady dose of hormones for 3–6 months depending on the individual needs of the patient.

Each pellet is compounded specifically for optimal biocompatibility with tailored hormone profiles based on the diagnosis.

Pellet Implants

Women		
Testosterone	20 – 100 mg	1 PEL
Estradiol	20 – 80 mg	1 PEL

Devices	
Stainless Steel Trocar (Insertion Device)	1 Unit

Men		
Testosterone	200 – 2,000 mg	1 PEL (200 mg)
Anastrozole	2 – 40 mg	Combined with PEL

Concentrations and volumes are indicative only, each item is compounded per patient. Terms and conditions apply.

Bioidentical HRT

Treating Hormonal Imbalance

Bioidentical HRT

Tailored relief for hormonal imbalances.

Fagron South Africa's topical BHRT formulations are meticulously compounded to suit the unique requirements of each patient, offering a bespoke solution for managing hormonal imbalance symptoms such as fatigue, weight fluctuations, diminished libido and night sweats.

Our personalised approach empowers practitioners to tailor the HRT regimen to address specific concerns, thereby enhancing the overall health and quality of life of their patients.

HRT Cream Innovation

Topical hormone replacement therapy creams deliver hormones directly into the bloodstream, alleviating symptoms of hormone deficiency.

For accurate and mess-free application, our creams come in convenient click or pump containers with metered dosing. Simply apply daily to the forearms, flanks or thighs as instructed.

HRT creams are formulated using HRT Heavy™, a hormone therapy topical cream base specifically designed for deep skin penetration and optimal effectiveness in both male and female hormone restoration formulations.

Bioidentical HRT

Transdermal Creams for Women

Doses

Estradiol	5 – 500 mg per container	50

Dermatology

Advanced Dermatological Care

Dermatology

Advanced dermatological care.

Fagron Advanced Derma ensures continuous care for the skin during the exacerbation and maintenance phases and guarantees maximum patient comfort for optimal compliance and results.

We prepare a variety of topical gels, creams, lotions and ointments to assist patients with the management of dermatological ailments. Our compounding pharmacists work with health care providers to deliver a customised dermatology.

Our vehicles or carriers are skin-friendly and suitable for use on sensitive and vulnerable skin. The gentleness, skin feel and visual appeal of each vehicle helps to improve patient compliance and quality of life.

Advanced Vehicle Development

All vehicles are developed and scientifically tested to help our pharmacists compound stable preparations with a broad range of active pharmaceutical and dermatological ingredients.

Fagron's unique advanced derma vehicles (or bases) do not cause skin irritation or long-term adverse or allergic reactions and are free of harmful, obsolete and controversial ingredients.

Alopecia

Treating Hair Loss

Alopecia

Experience regrowth
confidence.

Alopecia or hair loss is a common and distressing condition that affects men and women of all ages. It comprises all types of hair loss, from the scalp to any part of the body, whether localised or diffused.

The most common types of alopecia include:

Androgenetic Alopecia

Hair loss caused by an abnormal increase of androgens in the hair follicles.

Alopecia Areata

Autoimmune hair loss caused by a collapse of hair follicle immune privilege.

Telogen Effluvium

A transient form of hair loss characterised by abnormality of the hair cycle with excessive loss of telogen hairs after a triggering event such as medication and stress.

The image shows two bottles of Fagron hair care products. On the left is a white bottle labeled 'TrichoWash' with a red circular logo. On the right is a black bottle labeled 'TrichoCond' with a red circular logo. Both bottles have spray nozzles and detailed text on their labels.

Comprehensive Alopecia Care

Fagron offers a total solution for advanced, individualised therapy and care with a broad range of active pharmaceutical ingredient (API) and dermatological ingredient (DCI) treatment options based on the latest scientific knowledge.

These treatments, combined with comfortable, skin-friendly vehicles and unique pharmaceutical patient packaging and applicators, guarantee exceptional therapy and care for alopecia.

Suspensions, Solutions and Sprays

Flexibility in Patient Care

Suspensions, Solutions and Sprays

Delivering flexibility in patient care.

Fagron South Africa recognises the importance of diverse treatment options for prescribers. We offer a complete range of dosage forms, including oral and nasal sprays for convenient supplementation and cognitive support.

Additionally, our portfolio includes oral solutions for hormone replacement therapy, ideal for patients who may have difficulty with other methods. Suspensions are also available, particularly suited for paediatric, geriatric and patients with swallowing disorders.

This range of options empowers prescribers to create individualised treatment plans that optimise patient care.

Customised Medication Solutions

SyrSpend® SF provides convenient, safe and efficient vehicles for the preparation of oral liquid dosage forms. Based on food starch, its superior suspending properties provide consistent, individual dosing throughout treatment.

Fagron South Africa uses only SyrSpend® SF in our preparation of oral liquid dosage forms for our patients. Its excellent compatibility with a broad range of active pharmaceutical ingredients, combined with its meticulous ingredient safety, makes it highly suitable for compounding safe and stable customised medication.

Troches

Troches

**Personalised dosing
and enhanced absorption
for diverse needs.**

Fagron South Africa offers compounded troches, a unique dosage form ideal for patients who need faster-acting medication. Troches are medicated lozenges that dissolve slowly in the mouth, allowing medication to bypass the digestive system and enter the bloodstream directly through the oral mucosa.

This versatile dosage form is ideal for treating a variety of conditions, including hormone replacement therapy, erectile dysfunction, supplementation and medication administration for patients with swallowing difficulties.

Custom Troche Advantages

Personalised Dosing

Unlike commercially available lozenges, compounded troches can be formulated with specific medications and dosages to meet each patient's unique needs.

Enhanced Absorption

Buccal absorption through the mouth lining can lead to faster medication absorption compared to traditional tablets that need to pass through the digestive system.

Improved Palatability

Troches can be flavoured to mask unpleasant medication tastes, promoting better patient compliance.

Capsules

Compounded Capsules

Capsules

Unlock the potential of compounded capsules.

Expand your treatment options with compounded capsules, tailored to address unique patient needs. These capsules offer unmatched treatment flexibility, giving practitioners the power to create individualised solutions, fostering better patient outcomes and satisfaction.

Compliance and Control

Dose Control

Move beyond limitations of commercially available medications. Precisely adjust dosages for weight discrepancies, paediatric patients or tapering regimens.

Allergen and Sensitivity Relief

Eliminate unwanted inactive ingredients like dyes, lactose or gluten that can cause allergic reactions or digestive discomfort.

Enhanced Compliance

Improve medication adherence by creating capsules with preferred flavours or addressing swallowing difficulties with capsule size adjustments.

Combination Therapy

Simplify treatment plans by combining multiple medications into a single capsule, reducing pill burden and increasing convenience for patients.

Capsules

All capsules are prepared in Vegetable Capsules.

TrichoTest™

TrichoTest™

The genetic test for personalised hair loss treatment.

Studies show there is a relationship between the patient's genetic profile and how their hair loss responds to different types of treatment.

This means that not all hair loss treatments work for every patient, and the success of any given treatment depends on their genetic profile and lifestyle factors.

Thanks to the unique genetic analysis performed by Fagron TrichoTest™, practitioners can identify which hair loss treatments are most likely to provide the best results for a patient without guessing or testing different products.

Why take a Fagron TrichoTest™?

Discover the Genetic Factors Behind Patient Hair Loss

A full report with the explanation of patient genetic characteristics and their relationship with hair loss treatment is provided to practitioner.

Fully Personalised Hair Loss Treatment Plan

Together with the practitioner, the report can be used safely to formulate an informed personal treatment plan, knowing the selected options are most likely to provide the best outcome for their hair loss.

Specialist Support

Provides practitioners with a deep understanding of the patient's genetic characteristics and how they relate to their hair loss.

Scientifically Validated

The analysis used in Fagron TrichoTest™ has been scientifically validated by global research. As medical evidence develops and further information becomes known, the report may be updated at no additional cost.

TeloTest™

TeloTest™

Fight ageing with telomere analysis.

TeloTest™ is a genetic test for telomeric length analysis. Telomeres are DNA structures (TTAGGG tandem repeats) found at the end of chromosomes. They protect those chromosomes from errors that can happen during the cell-division cycle and against external and internal damaging agents.

Telomeres shorten in every cell-division cycle, and that decrease in length is directly associated with human aging. In cases of early aging, telomeric length is often detected as shorter than expected, providing information about the degree of cellular aging of the body. Longer telomeres are related to increased lifespan and delayed development of age-related diseases.

Who can benefit from a Fagron TeloTest™?

- Anyone older than 30 who is concerned about their ageing process and looking for solutions to slow it down.
- Anyone with a family history of early ageing or development of medical conditions that contribute to it.
- Anyone interested in a specific and complete follow-up of their ageing process during their life.
- Anyone who wants an effective and personalised anti-ageing treatment regime.

FagronLab

Fagron Compounding Equipment

FagronLab

The first global product line of compounding equipment, designed and developed by Fagron.

FagronLab is a premier product line specifically designed for modern compounding pharmacies.

From state-of-the-art mixing systems to hygienic essentials like robot vacuums and UV air sterilisers, FagronLab provides everything compounding pharmacists need to optimise their workflow.

FagronLab is the ultimate partner in delivering exceptional patient care.

FagronLab Wetmill

Planetary colloidal milling solution for pharmacies

FagronLab PRO-DMS

Digital hotplate magnetic stirrer

FagronLab ION-e

Electrostatic-free powder handling

FagronLab Unguator

Mixing in a closed environment (GMP) up to 500 ml

FagronLab Invomatic

Advanced 3-axis mixing technology for compounding

FagronLab 3DRM500

Hotplate magnetic stirrer

FagronLab 3DRM500

Semi-automatic manual capsule filling system

FagronLab 3DRM500

3D Mixing System
